<b>Student Name:</b>	Abhilash Janardhanan
<b>Student ID:</b>	X23121424
<b>Programme:</b>	Data Analytics
<b>Year:</b>	2024
<b>Module:</b>	MSc Research Project
<b>Supervisor:</b>	Shubham Subhnil
<b>Submission Due Date:</b>	12/12/2024
<b>Project Title:</b>	Configuration Manual
<b>Word Count:</b>	XXX
<b>Page Count:</b>	6

I hereby certify that the information contained in this (my submission) is information pertaining to research I conducted for this project. All information other than my own contribution will be fully referenced and listed in the relevant bibliography section at the rear of the project.

**ALL** internet material must be referenced in the bibliography section. Students are required to use the Referencing Standard specified in the report template. To use other author's written or electronic work is illegal (plagiarism) and may result in disciplinary action.

<b>Signature:</b>	Abhilash Janardhanan
<b>Date:</b>	12th December 2024

**PLEASE READ THE FOLLOWING INSTRUCTIONS AND CHECKLIST:**

Attach a completed copy of this sheet to each project (including multiple copies).	<input type="checkbox"/>
<b>Attach a Moodle submission receipt of the online project submission</b> , to each project (including multiple copies).	<input type="checkbox"/>
<b>You must ensure that you retain a HARD COPY of the project</b> , both for your own reference and in case a project is lost or mislaid. It is not sufficient to keep a copy on computer.	<input type="checkbox"/>

Assignments that are submitted to the Programme Coordinator office must be placed into the assignment box located outside the office.

<b>Office Use Only</b>

Penalty Applied (if applicable):	

# Configuration Manual

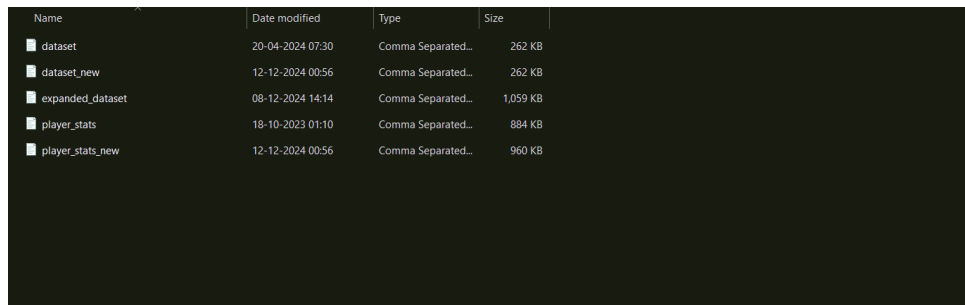

Abhilash Janardhanan  
X23121424

## 1 Introduction

The Football Player Scouting and Recruitment System is a machine learning application that uses data on a player's skills and his injury record to predict their performance. This configuration manual is an extensive guide setting up, configuring, and then deploying the system. Its target audience includes system administrators and developers responsible for application maintenance.

## 2 Screenshots of the System

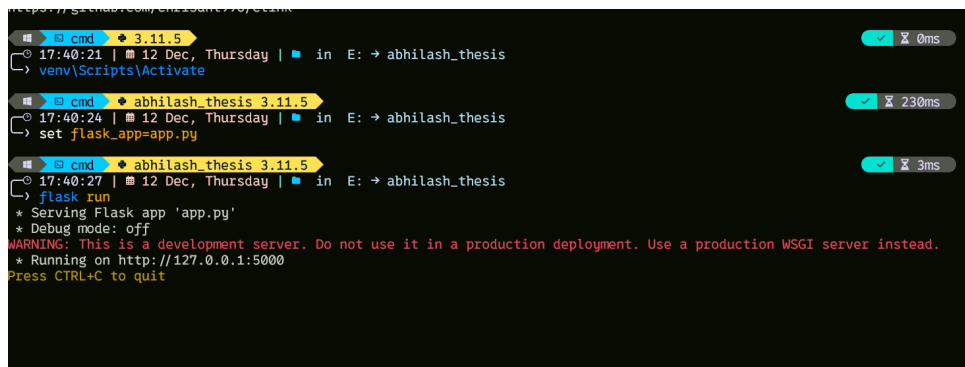

### 2.1 Dataset Files

A screenshot of a file explorer window with a dark background. It displays a table of files with columns for Name, Date modified, Type, and Size. The files listed are 'dataset', 'dataset\_new', 'expanded\_dataset', 'player\_stats', and 'player\_stats\_new'. All files are 'Comma Separated...' type.

Name	Date modified	Type	Size
dataset	20-04-2024 07:30	Comma Separated...	262 KB
dataset_new	12-12-2024 00:56	Comma Separated...	262 KB
expanded_dataset	08-12-2024 14:14	Comma Separated...	1,059 KB
player_stats	18-10-2023 01:10	Comma Separated...	884 KB
player_stats_new	12-12-2024 00:56	Comma Separated...	960 KB

Figure 1: List of dataset files used for the system, including original and processed datasets.

## 2.2 Flask Backend Server

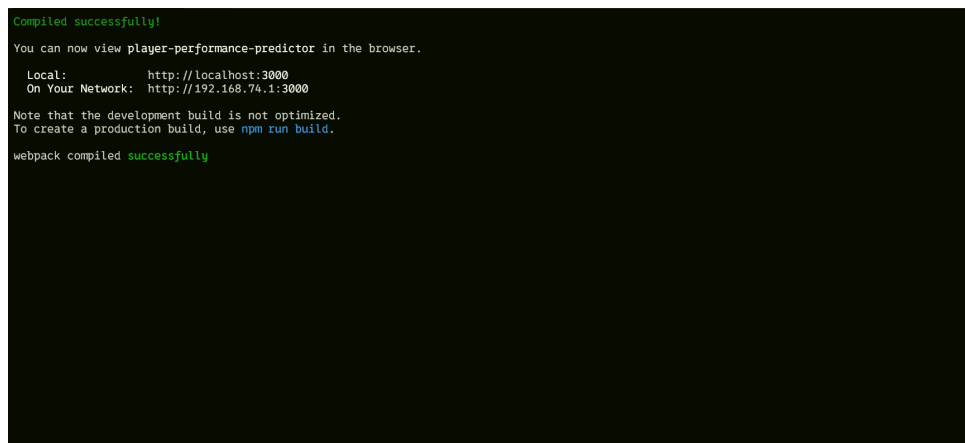

```
cmd 3.11.5
17:40:21 | 12 Dec, Thursday | in E: → abhilash_thesis
→ venv\Scripts\Activate

cmd abhilash_thesis 3.11.5
17:40:24 | 12 Dec, Thursday | in E: → abhilash_thesis
→ set flask_app=app.py

cmd abhilash_thesis 3.11.5
17:40:27 | 12 Dec, Thursday | in E: → abhilash_thesis
→ flask run
* Serving Flask app 'app.py'
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
```

Figure 2: Flask backend server running on localhost at port 5000. This server handles API requests for the prediction model.

## 2.3 Frontend Compilation

```
Compiled successfully!

You can now view player-performance-predictor in the browser.

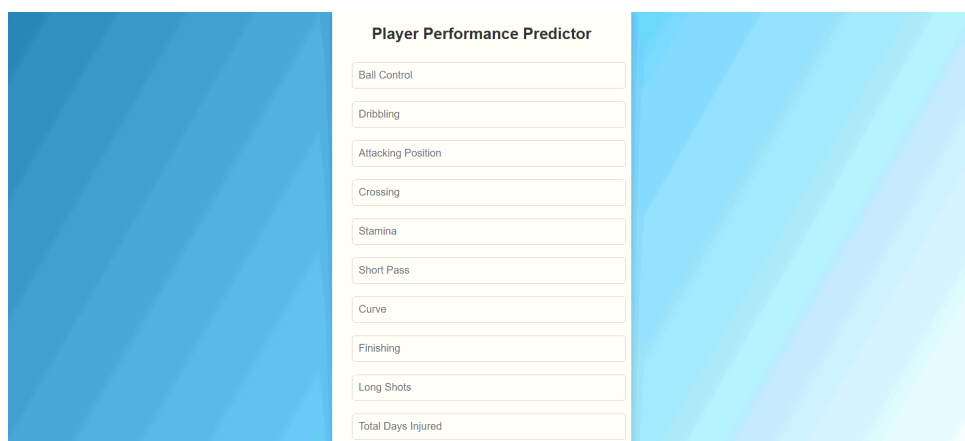

Local:      http://localhost:3000
On Your Network:  http://192.168.74.1:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
```

Figure 3: Frontend application compiled successfully. It can be accessed locally at port 3000 or over the network.

## 2.4 Player Input Form

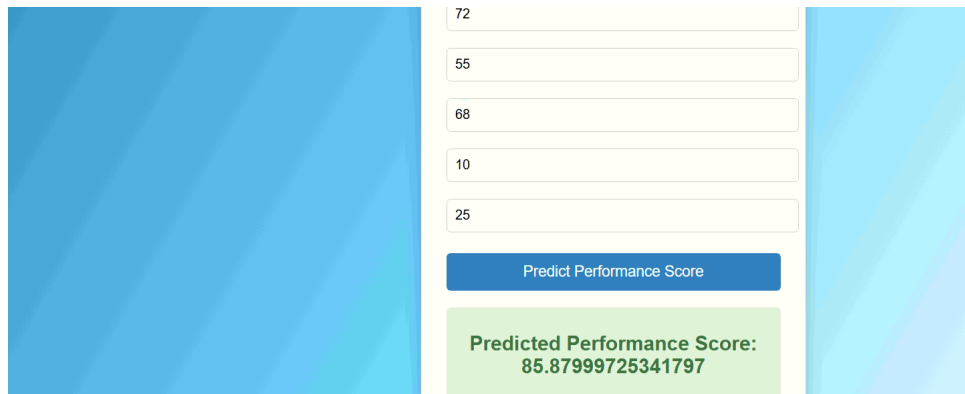

**Player Performance Predictor**

Ball Control
Dribbling
Attacking Position
Crossing
Slamina
Short Pass
Curve
Finishing
Long Shots
Total Days Injured

Figure 4: Frontend interface for inputting player statistics and injury details.

## 2.5 Performance Prediction Output

A screenshot of a web application interface for predicting performance scores. It features five input fields with values 72, 55, 68, 10, and 25. A blue button labeled 'Predict Performance Score' is positioned below the inputs. A green box at the bottom displays the 'Predicted Performance Score: 85.87999725341797'.

72
55
68
10
25
<b>Predict Performance Score</b>
<b>Predicted Performance Score:</b> 85.87999725341797

Figure 5: Predicted performance score displayed in the frontend after submitting player data.

## 3 System Requirements

Before proceeding with the installation and configuration, ensure that the following system requirements are met:

### 3.1 Hardware Requirements

- **Processor:** Intel i5 or higher
- **RAM:** 8 GB minimum
- **Storage:** 100 GB available space

### 3.2 Software Requirements

- **Operating System:** Ubuntu 20.04 LTS or later
- **Python:** Version 3.8 or higher
- **Node.js:** Version 14.x or higher

## 4 Installation

This section outlines the steps to install the necessary components for the system.

### 4.1 Backend Setup (Flask)

1. **Create a Virtual Environment:**

```
python3 -m venv venv
source venv/bin/activate
```

## 2. Install Dependencies:

```
pip install -r requirements.txt
```

## 3. Configure Environment Variables: Create a ‘.env’ file in the project root and add the following:

```
FLASK_APP=app.py  
FLASK_ENV=production  
SECRET_KEY=your_secret_key
```

## 4. Run the Flask Server:

```
flask run
```

## 4.2 Frontend Setup (React)

### 1. Install Dependencies:

```
npm install
```

### 2. Configure API Endpoint: Edit the ‘config.js’ file to point to the Flask backend API.

### 3. Run the React Application:

```
npm start
```

# 5 Configuration

Correct configuration ensures that the machine runs smoothly without any hiccups or errors. This chapter contains the configuration instructions for all backend and frontend addons.

## 5.0.1 Model Deployment

1. **Place the Trained XGBoost Model:** Save the ‘xgboost\_model.pkl’ in the ‘models/’ directory.
2. **Update Configuration:** This should ensure that the Flask application is configured to load the model from the right path.

## 5.1 Frontend Configuration

### 5.1.1 API Integration

1. **Set API Base URL:** Inside the file 'config.js' define 'API\_BASE\_URL' to equal the Flask backend endpoint.
2. **CORS Configuration:** Flask backend should allow CORS requests from frontend domain.

### 5.1.2 Environment Variables

1. **Create a '.env' File:** Import required environment variables like API endpoints and secret keys

## 6 Usage

After setting up the system and deployment, users are free to interact with the application that will predict how a player will perform.

### 6.1 Accessing the Application

Open your web browser and type into its address bar the frontend URL displayed on the CMD.

### 6.2 Inputting Player Data

The frontend interface is used to input participant facts and injury facts. All required fields must be filled up properly so that it would provide reliable predictions.

### 6.3 Viewing Predictions

Once submitted, the system processes the input data and shows a performance prediction by exercising a trained machine learning model.

## 7 Troubleshooting

This section provides solutions to common issues encountered during configuration and usage.

### 7.1 Backend Server Not Starting

- **Cause:** Missing environment variables.
- **Solution:** Verify that the '.env' file contains all necessary variables.

## 7.2 Frontend Fails to Connect to Backend

- **Cause:** Incorrect API endpoint configuration.
- **Solution:** Check the 'config.js' file and ensure the API base URL is correct.

## 7.3 Model Prediction Errors

- **Cause:** Corrupted or incompatible model file.
- **Solution:** Re-train the model and replace the existing model file with the new one.

# 8 Conclusion

This configuration manual provides complete commands for setting up, configuring, and deploying the Football Player Scouting and Recruitment System. Adhering to these suggestions will make sure a easy installation system and most beneficial gadget performance. For similarly assistance, refer to the venture's GitHub repository or touch the improvement crew.
